Project	Management Plan Historic Inner City of Bamberg
Commissioned by	City of Bamberg / World Heritage Center of Bamberg
Execution	Since 2015
	<p>The historic inner city of Bamberg was added to the World Heritage List in 1993. The Bamberg World Heritage includes the three different parts of Bergstadt, Inselstadt and Gartenstadt, which all stand very different management requirements.</p> <p>As part of the revision of the management plan, it is important, among other things, to develop strategies to manage risks and challenges in the preservation and sustainable development of the Bamberg World Heritage. Therefore, an extensive public participation procedure was carried out, and different specialist groups developed ideas that should be integrated into the management plan.</p> <p>The focal points of the management plan are the implementation of public participation and process management in securing the historical cityscape of Bamberg.</p>
Co-Worker	Baharak Seyedashrafi, Michael Kloos
Partner	In cooperation with scheuven+wachten / Dortmund
Status / Result	Ongoing, completion scheduled for 2019.
